Finnsusp Oy is a Finnish full-service manufacturer and wholesaler in the optical field. Established in 1978, the company was first engaged in R&D and production of contact lens care solutions. Today Finnsusp has grown into a highly professional and reliable partner in all the areas of the optical business; manufacturing of care solutions and spectacle lenses by the FreeForm technology. All operations at Finnsusp Oy are based on uncompromised quality and full customer satisfaction. Finnsusp Oy holds ISO 9001 and ISO 13485 Quality Management Certificates since 1996. Medical Device EC certificate for care solutions was granted in 1997 and for contact lenses in 2006.
Allergies are very common these days. For this reason, Finnsusp Oy is strongly focusing on developing products that suit the needs of all the contact lens wearers. Piiloset BioTwin™ is developed in co-operation with the Allergy and Asthma Federation in Finland, which is an independent and objective health organization. Only products that are found not to contain irritating or allergizing ingredients may obtain the right to use the Allergy label. Before granting the Allergy label, the product is thoroughly evaluated by third party specialists such as health care professionals and chemists.

Piiloset BioTwin™ is the only care solution on the market that has the right to use the valuable Allergy label. None of the Piiloset care solutions have undergone animal testing.

Obnoxious dry eye sensations are often the reason to discontinue or limit wearing of contact lenses. To gain maximum effect of the new lubricating and moisturising Piiloset eye care products, we recommend using simultaneously Piiloset BioTwin™ care solution and Piiloset BioDrop lubricating ophthalmic solution. The new care products whose properties perfectly complete one another allow also people with dry and sensitive eyes to wear contact lenses and wear them longer. Piiloset BioDrop is preservative-free and thus particularly suitable for contact lens wearers, before and during use.
